

Heuchera pilosissima

Shaggy Alumroot

Saxifragaceae

Exposure Sun or part shade

Water Occasional water

Form Perennial

Height 1 foot

Flower color White to pink

Bloom time Spring

This is one of the largest alumroots with 3 inch evergreen leaves growing in basal clumps that spread by offsets. The pink tinted flowers densely cover 18 inch spikes. Near the coast adapts to dry shade or sun with additional water and good drainage. Makes a nice ground cover for large areas.

Habitat Coastal bluffs, shaded canyons
